What is Markdown?

Markdown is a lightweight markup language for creating formatted text using a plain-text editor.

In other words, Markdown is a quick & easy way to format plain text using special characters like asterisks, dashes, underscores, etc. Markdown enables you to create headers, lists, code blocks, and much more things.

Markdown is widely used in blogging, instant messaging, online forums, collaborative software, documentation pages, and readme files.

Here's the cheatsheet of Markdown ↓
